Software Engineer with more than 3 years experience in interactive systems, XR development, and data-driven application design. Skilled in JavaScript/TypeScript, React, C#, and Unity, I combine software engineering with a strong sense of creativity and visual design. My work focuses on web and immersive technologies, building intuitive, modular, and engaging applications, systems, and simulations. I'm particularly interested in creating user experiences that merge technical depth with aesthetics, fostering learning, exploration, and innovation across digital environments.

Experience	XR Software Engineer & UI/UX — ORamaVR SA	📅 Sep 2022 - May 2025
	- Served as a core engineer for four commercial medical training applications, focusing on UI/UX and interactive game mechanisms. - Designed and implemented interactive, modular, and data-driven interfaces using Unity and C#, optimised for cross-platform deployment. - Developed custom SDK features (interactive components, animation systems, analytics modules, event handlers) to support scalable application development. - Collaborated with designers and clinical experts to translate usability requirements into functional prototypes and production-ready UI. - Shipped and maintained released simulations, delivering continuous updates, performance optimizations, and user-driven feature improvements.	
	Full-Stack Software Engineer Intern — Sapienza University of Rome	📅 Oct 2023 - Feb 2024
	- Contributed to <i>TraVIS</i>, a visual analytics web system for analyzing user interaction data. - Implemented front-end logic, data visualization components, and API communication using JavaScript, MongoDB and Python. - Collaborated with researchers to evaluate prototypes through process mining and user-trace analysis.	
	Research Assistant — Institute of Computer Science, FORTH-HELLAS	📅 Jul 2019 - Mar 2025
	- Participated in multiple research projects focused on UI engineering, accessibility, and interaction design. - Developed and evaluated prototypes using React, Angular, and React Native. - Conducted heuristic evaluations and user studies to improve interaction workflows. - Assisted teaching programming and HCI courses for undergraduate students.	

Skills	Programming Languages	Frameworks & Libraries
	C#, JavaScript, Typescript, HTML5/CSS6, C++, SQL, Python	Node.js, React, React Native, Angular, Express, Unity, .NET, REST APIs, OpenXR, Meta Interaction SDK,
	Databases	Cloud & DevOps
	MongoDB, MySQL	Git, AWS, Docker, Kubernetes, CI/CD,
	Design	
	Figma, Canva, Adobe XD	

Education	Graduate Degree (MSc) in Computer Science and Engineering — University of Crete	📅 Sep 2022 - Mar 2025
	- Technical focus: Computer graphics, human-computer interaction and Cloud Computing - Thesis: "XRSynthesizer: Context-Driven Assembly of XR Widgets in Real Time": Designed and developed a modular XR framework enabling real-time, cloud-driven integration of interactive 3D UI components across XR applications.	
	BSc in Computer Science — University of Crete	📅 Sep 2018 - Jun 2022
	Thesis: "Vesti-Aml: The Intelligent Wardrobe" — iOS app in React Native for accessible outfit recommendations.	

Publications	Publications in IEEE TVCG , EUROXR , CGI , HCSE , and PETRA (2023–2025) on interactive systems, data visualisation, and user-centred design.
